Quality Lubricants

The Gardner Denver Warranty Renewal Program

Exclusive to Gardner Denver, our Warranty Renewal Program provides comprehensive “insurance” for customers who want the peace of mind to know that their blowers will be maintained to perform at top efficiency. The Gardner Denver Warranty Renewal Program is a factory service performed at your site. Unless the blower has experienced “catastrophic” failure, we service the unit on-site, saving costly downtime and transportation charges. Work is performed by skilled factory-trained technicians who understand blowers. Our professional technicians inspect and identify root causes and problems that other “general service” repair companies often don’t understand or simply overlook. Any worn or defective components are replaced or repaired using only genuine factory parts. We don’t use reconditioned

parts like some outside repair shops do. As a preferred customer, you won’t pay third party mark-up on our parts and lubricants.

While we perform our Warranty Renewal Service, our professionals train your operators and maintenance personnel on how to get the maximum efficiency out of your blowers. We will demonstrate how to optimize performance based on the specific demand of the blower, which can lead to tremendous operating cost savings. Best of all, after the service is complete, a brand

new factory warranty is placed on the blower as though it had been purchased new. Typically, the cost for this service is less than the cost of one service visit to repair a single bearing failure. No other manufacturer offers such complete proactive “insurance” for the long life and protection of your blowers.

What it can mean for your operation

A major Midwest pharmaceuticals manufacturer has 13 Lamson blowers used in various processes throughout its manufacturing facility. This customer was paying in excess of \$100,000 annually to a local mechanical contractor for maintenance service on their Lamson blowers. After continuing to have maintenance-related problems, the company contacted the Gardner Denver Blower Division Service Department for assistance. Gardner Denver sent a service technician to the customer’s location where he surveyed the equipment and processes in the facility and made recommendations for future blower service.

This customer now subscribes to the Gardner Denver Warranty Renewal Program and is paying less than 10% of the former maintenance cost. The blowers are serviced in place saving valuable production time and the factory warranty never ends. What’s more, Gardner Denver service technicians showed the customer how the facility could operate using two less blowers, resulting in significant energy cost savings.

Gardner Denver...Over 100 Years of Quality Service and Parts

Since our inception over 100 years ago, Gardner Denver has provided quality industrial products backed by superior service and aftermarket support. Today, the Gardner Denver Blower Division continues the tradition, offering an international team of engineers and service professionals who know how to keep your blowers running at maximum efficiency. Our factory-trained service technicians are available for on-site/on-demand repair service, training, troubleshooting and consulting. We service Gardner Denver Lamson blowers, as well as most other brands of centrifugal blowers. For added insurance, we offer our Preventative Maintenance Programs and our exclusive Gardner Denver Warranty Renewal Program.

With superior service comes superior parts. Third party repair shops have sometimes been known to use re-conditioned parts for blower repairs, resulting in short repair life. Inappropriate and non-factory approved lubricants may also be incorrectly specified. At Gardner Denver, we use only factory-approved replacement parts and superior lubricants specifically formulated for optimal blower performance.

Protect your investment with confidence. Go with the Gardner Denver team of service and customer service professionals for all of your after-the-sale service and aftermarket needs.

Training, Troubleshooting and Consulting

Need an expert opinion? Call Gardner Denver for pre-sale consulting, start-up assistance, after-sale service advice or operating and maintenance training. Our service professionals will work with you before the sale to analyze your system requirements and after-the-sale to provide maintenance and operation training.

On-Site/On-Demand Trouble Shooting and Repair Service

When your blower/exhauster is down and you need immediate attention, you can depend on the highly trained and knowledgeable Gardner Denver Blower Division Service Department. We have factory trained service technicians located in strategic areas across the country that can be dispatched directly to your facility. In most cases, our technicians can fix your blower at your site, saving you both shipping charges and downtime production losses. As always, our professionals use only Genuine Gardner Denver factory replacement parts and lubricants. For evening and weekend emergency situations, Gardner Denver is the only blower manufacturer to offer a 24 hours / 7 days a week Emergency Help Line for technical or service assistance.

Genuine Gardner Denver Factory Parts and Quality Lubricants

When it's time to replace the typical wear components or change the grease or oil in your blower, nothing outperforms genuine Gardner Denver factory parts and lubricants. Our skilled customer service professionals will help you make sure you receive the correct parts and accessories for your specific blower configuration.

Gardner Denver Bearing Replacement Kits A key part of routine blower maintenance is periodic bearing replacement. Replacement Kits contain all of the exact factory parts needed for complete replacement of all critical wear components. Gardner Denver Replacement Bearings are designed to provide the exact fit needed for the high temperature environment of centrifugal blowers.

Gardner Denver Centrifugal Blower Lubricants Each lubricant is specially formulated to provide maximum protection for centrifugal blowers. Proper maintenance and lubrication are of extreme importance to ensure long, reliable blower service. AEON™ CF Centrifugal Blower Lubricant and Gardner Denver Lamson Number 5 Grease are long lasting, high performance lubricants containing rust and oxidation inhibitors.

Genuine GD Parts and Accessories Gardner Denver is also your source for all other replacement parts and accessories ranging from filter elements, to seals, control components – all the way up to large cast parts.

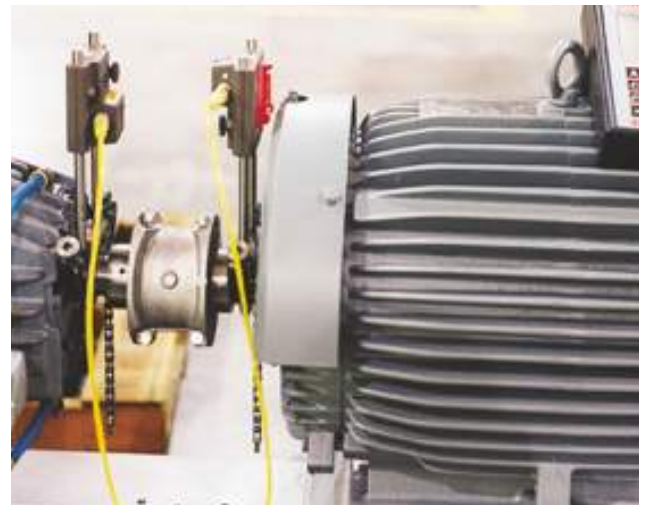

Gardner Denver Remanufactured Blowers/Exhausters

When multiple or extensive repairs are required, Gardner Denver offers remanufacturing as a cost-effective alternative to purchasing a new blower/exhauster. Gardner Denver has three locations across the country specifically outfitted for remanufacturing: Peachtree City, GA; Fishers, IN; and Houston, TX. Factory service technicians completely disassemble, clean, inspect and remanufacture your blower to its original performance specifications. Remanufactured blowers carry a new factory warranty, and feature Genuine Gardner Denver factory parts and high quality lubricants.

System Optimization Service

Over time, the performance demands and operating environment for your blowers may change, but the blower configuration may not. As a result, you may be wasting money on energy costs using blowers as they were originally configured. With our System Optimization service, our factory service technicians analyze and re-configure your blower if necessary to achieve optimum system efficiency based on the current operating environment.

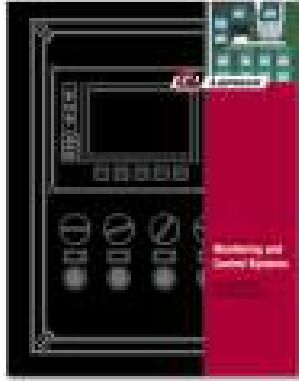

Lamson® Monitoring and Control Systems

Whether you're responsible for a wastewater treatment plant, the smelting operation at a foundry or the precise material handling needs of a manufacturing facility, you need control systems to properly operate your blowers and exhausters and protect them from conditions that may lead to catastrophic mechanical failure, a void warranty and costly downtime. At Gardner Denver, we engineer a variety of control systems and monitors capable of providing you with the protection and information you need to keep your operation running at its best. Our control systems can monitor a variety of conditions that include motor current, motor temperature, blower vibration, bearing temperature, bearing oil level, discharge temperature, inlet vacuum and outlet pressure.
